

Protecting Your Sensitive Information in Workday®

In a data-driven world, protecting your sensitive information is crucial for success. Keep your data secure with Rooster's enterprise-grade security features that seamlessly integrate into your Workday® Recruiting platform.

Data Encryption

All user data and system backups are encrypted, at all times, with AES 256-bit encryption as a minimum standard.

Data Privacy

Any data processed in Rooster is solely used for the purposes of powering your services. You remain the owner of all sensitive information.

Data Security

Your data is hosted in one of our secure data centers and is logically separated with limited access.

Data Ownership

Your data belongs to you. If your contract expires, you'll have 30 days to export all data.

Physical Security

Rooster is hosted on GCP, providing you with a top-notch, physical data center for security and redundancy.

Security & Privacy Training

All Rooster employees are required to take mandatory security training within two weeks of their start date and annually to ensure the expert support that your organization needs.

Principle of Least Privilege

We don't want keys to your kingdom. All security requirements have been trimmed to only ask for what is needed.

Disaster Recovery

Rooster will regularly back up your data, present defined RTO and RPO, and audit backups on a frequent basis.

GCC and GCC High

Rooster is equipped with full Office 365 GovCloud Support (GCC and GCC High (Levels 1-5)). This is critical for our government contractor clients who want to leverage Interview Scheduling with Workday.

Rooster integrates with GovCloud seamlessly – utilizing the same user interface, regardless of which Microsoft Cloud provider is used. This allows you to have multiple Microsoft Office 365 domains connected to Rooster, each using a different Microsoft Cloud.

We identified a problem and implemented our solution. Please reach out if you are an Office GovCloud client that wants to learn more about Rooster!

- ✓ Microsoft Graph Global Service (default public cloud)
- ✓ Microsoft Hybrid Cloud
- ✓ Microsoft Graph for US Government L4 (GovCloud)
- ✓ Microsoft Graph for US Government L5 (DOD)
- ✓ Microsoft Cloud Germany
- ✓ Microsoft Cloud operated by 21Vianet in China

GDPR Compliance

Rooster's quick, well-defined process ensures your organization's compliance with EU General Protection Regulation (GDPR) guidelines by entitling you to request us to erase any personal data we hold about you.

Rooster is fully managed within the Google Cloud Platform, delivering you leading edge technology and security
